

## High-speed placement system

MX, the high-speed placement system from Mimot, reportedly boasts a number of new, innovative features and technology designed to compete with the fastest competitive pick and place machines available. Key features include cascading modularity with placement rates of up to 80,000 c/h, 216 feeder slots per segment, and full range component capability. The system also features double placement areas in

each module, with a highly sophisticated multilevel transport system for absolute line balancing and the elimination of "local head-downtimes".
